- Bearer: Required. Specifies the API key which can be obtained on Pipefy's User configuration.
- CardID: Required. Specifies the Card Id that will be deleted.

Output:

- Return: Result from the action. It will return a JSON String.

Move Card

Input:

- Bearer: Required. Specifies the API key which can be obtained on Pipefy's User configuration.
- CardID: Required. Specifies the Card Id that will be moved.
- PhaseID: Required. Specifies the Phase Id that will be Card's destination.

Output:

- Return: Result from the action. It will return a JSON String.

Show Card

Input:

- Bearer: Required. Specifies the API key which can be obtained on Pipefy's User configuration.
- CardID: Required. Specifies the Card Id that will be shown.

Output:

- Return: Result from the action. It will return a JSON String.

Database Activities

Delete Table

Input:

- Bearer: Required. Specifies the API key which can be obtained on Pipefy's User configuration.
- TableID: Required. Specifies the Table Id which will be deleted.

Output:

- Return: Result from the action. It will return a JSON String.

List Tables

Input:

- Bearer: Required. Specifies the API key which can be obtained on Pipefy's User configuration.
- TablesID: Required. Specifies the Tables Id which will be shown.

Output:

- Return: Result from the action. It will return a JSON String.

Set Table Record

Input:

- Bearer: Required. Specifies the API key which can be obtained on Pipefy's User configuration.
- FieldRecordID: Required. Specifies the Field Record Id which will be shown.
- FieldValue: Required. Specifies the Value that the Field Record will receive.
- TableRecordID: Required. Specifies the Table Record ID that will be updated.

Output:

- Return: Result from the action. It will return a JSON String.

Show Table Record

Input:

- Bearer: Required. Specifies the API key which can be obtained on Pipefy's User configuration.
- TableRecordID: Required. Specifies the Table Record ID that will be shown.

Output:

- Return: Result from the action. It will return a JSON String.

Organization Activities

Create Organization

Input:

- Bearer: Required. Specifies the API key which can be obtained on Pipefy's User configuration.
- Industry: Required. Specifies the Type of Company which will be created.
